## What's it Do?

### Software Configuration Management

- wiki for collaboration
- Interface to subversion for change management.
- Timeline for milestones, progress reports, etc.
- Ticketing system
- Integration with email

## Installation

### **We'll create a fairly complex trac project...**

- Multiple trac environment configuration.
- Authentication via trac not Apache.
- trac user admin via web interface.
- write-protected for anonymous users.
- Ability to add subversion later.
- Aztech calendar plug-in.

## trac: Some Details

- **Let's look at the wiki...**
- **Let's look at the ticketing system...**
- **Let's look at different user views...**
- **Then we'll install.**

# trac install and post install

Let's do the following:

- 1.) Install
- 2.) Review the install
- 3.) If time, do a few more exercises:
  - Add "TICKET\_VEW" to the *anonymous* user profile.
  - Find a plugin you want and install.
