

Running a NREN: Philippine Experience

Bani Lara

Advanced Science and Technology Institute (ASTI)
Philippine Research, Education and Government Information Network (PREGINET)

Advanced Science and Technology Institute (ASTI)

- ICT and microelectronics R&D agency under the Philippines' Department of Science and Technology (Ministry level)

Advanced Science and Technology Institute (ASTI)

- Situated in proximity to the national weather bureau; national volcanology & seismology bureau; and the main campus of the University of the Philippines

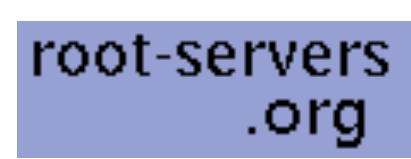

Advanced Science and Technology Institute (ASTI)

- Manages and operates the National R&E Network called the Philippine Research, Education, and Government Information Network (PREGINET)
- Established in 2000
- Connected to:
 - A13 (since 1999)
 - APAN (since 2004)
 - TEIN (since 2005), 2nd generation of the TEIN initiative

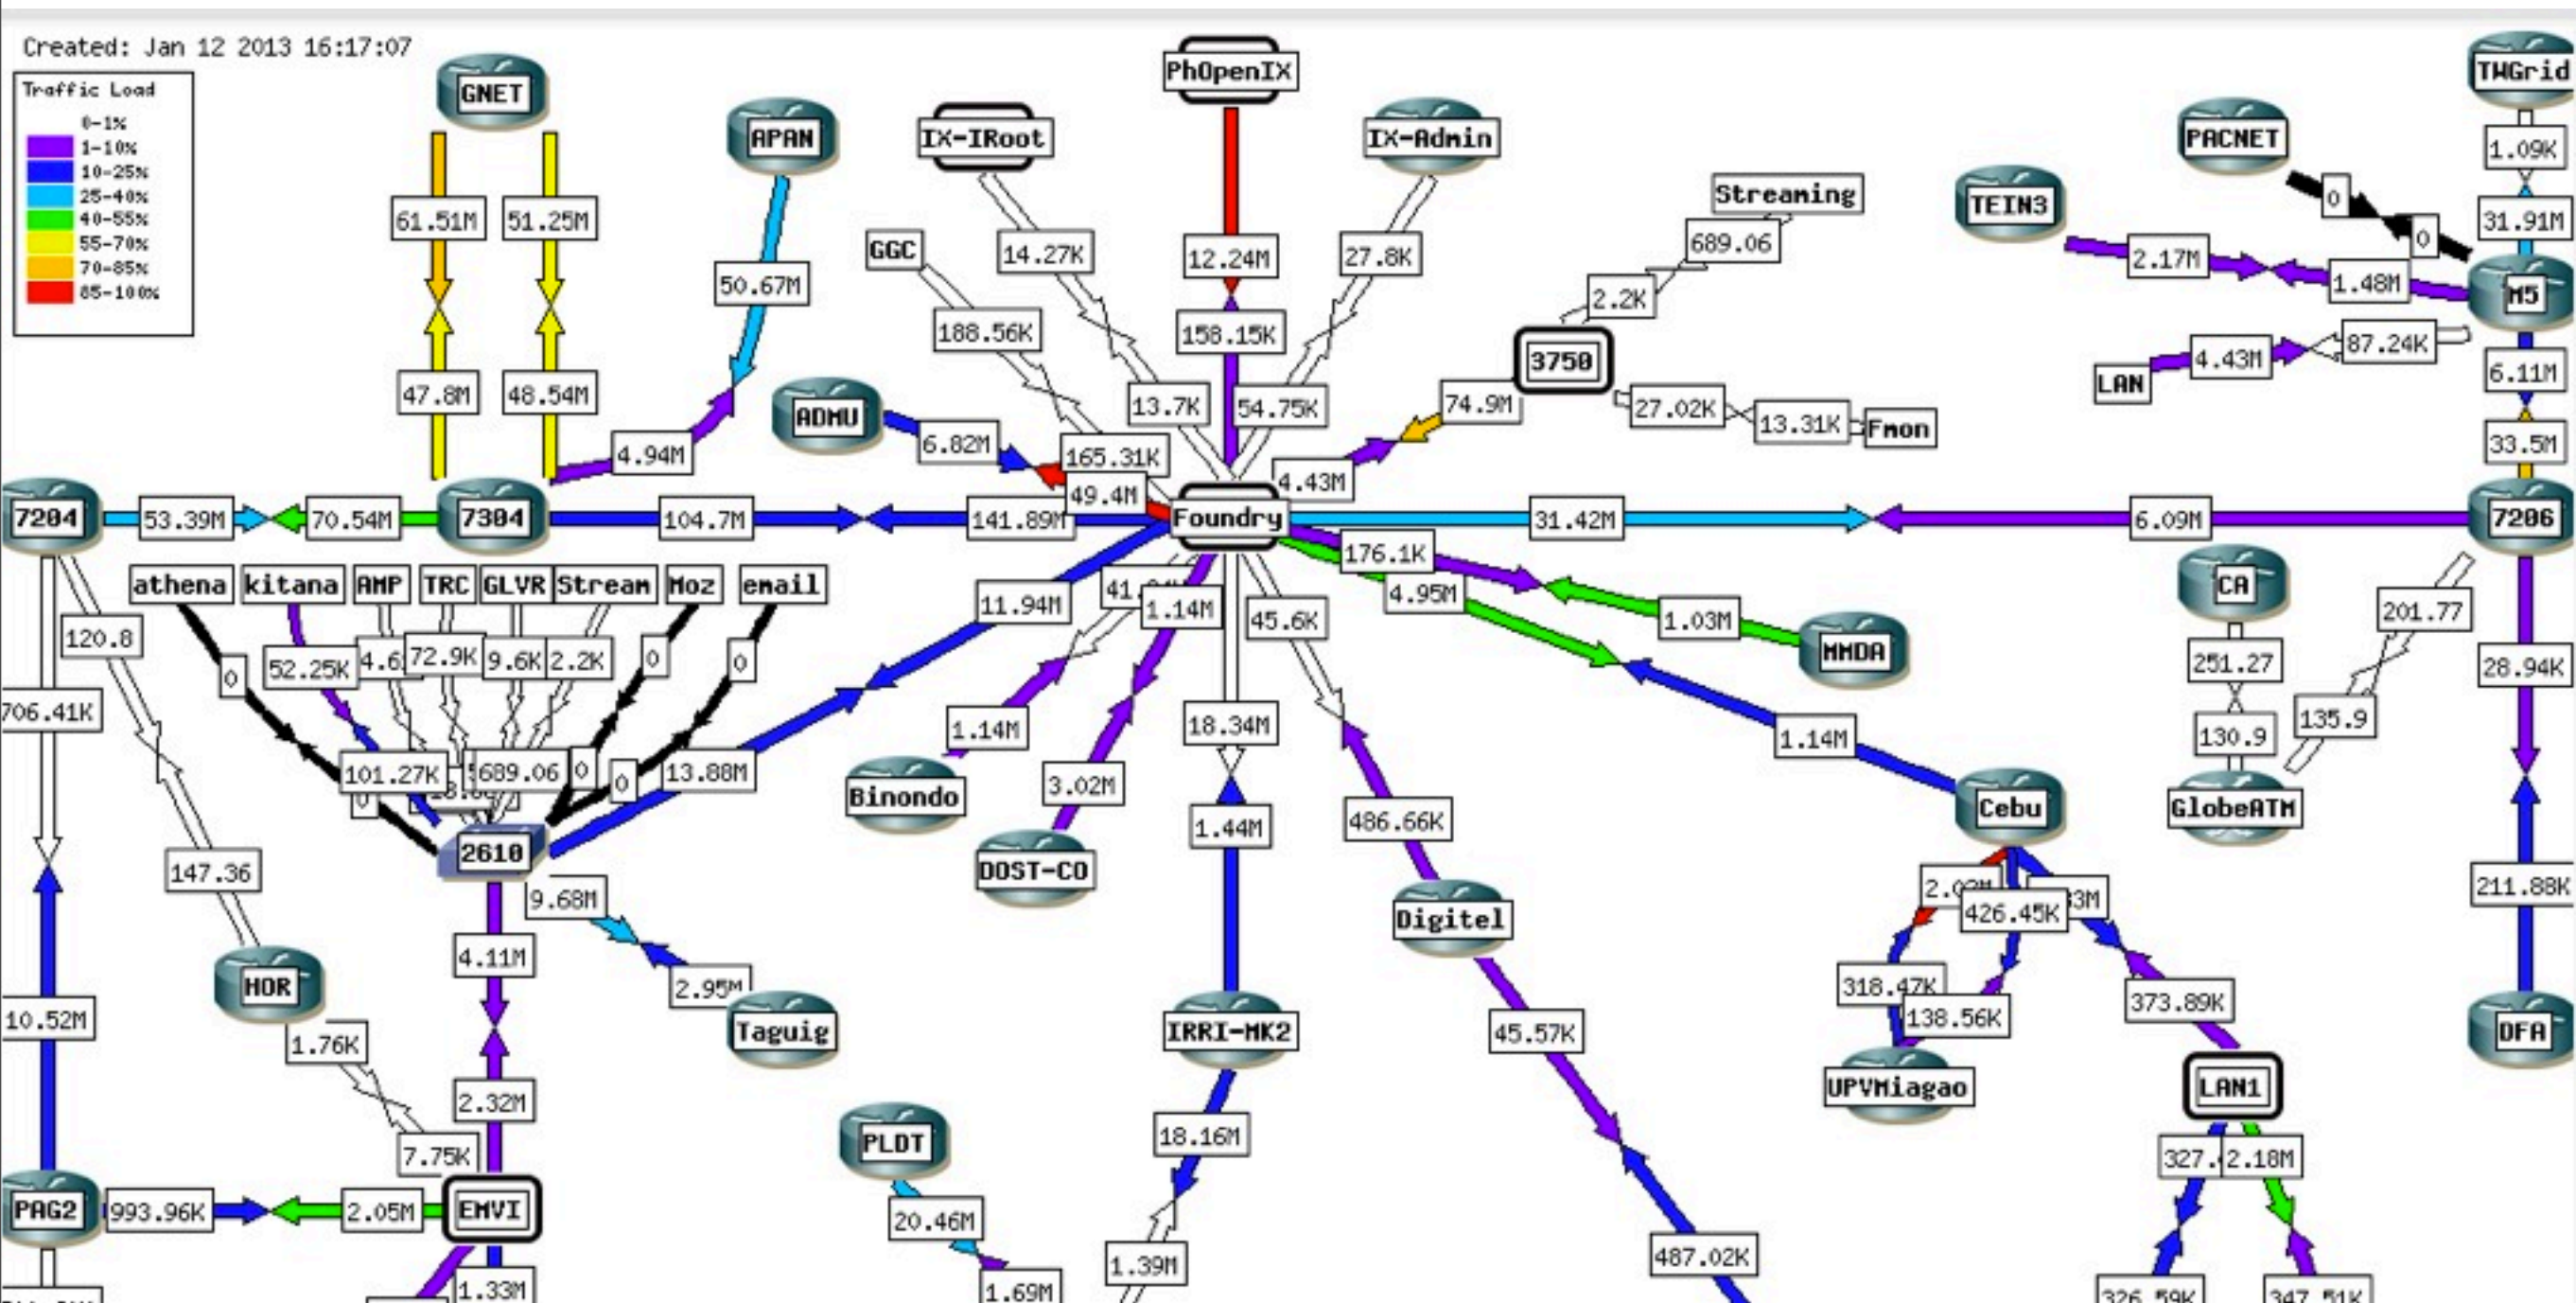

PREGINET Partners

PREGINET Infra

Heavy User of FOSS

Network Links (R&D)

- 155Mbps to APAN-Japan (R&D)
- 22.5Mbps to TEIN3-Hongkong to be upgraded to 45Mbps by Feb 2013 (TEIN*CC)
- 155Mbps sat-link to the WINDS Project (JAXA, Japan)
- 13Mbps UDLR sat-link going to A13, Keio University, Japan

Network Links (non-R&D)

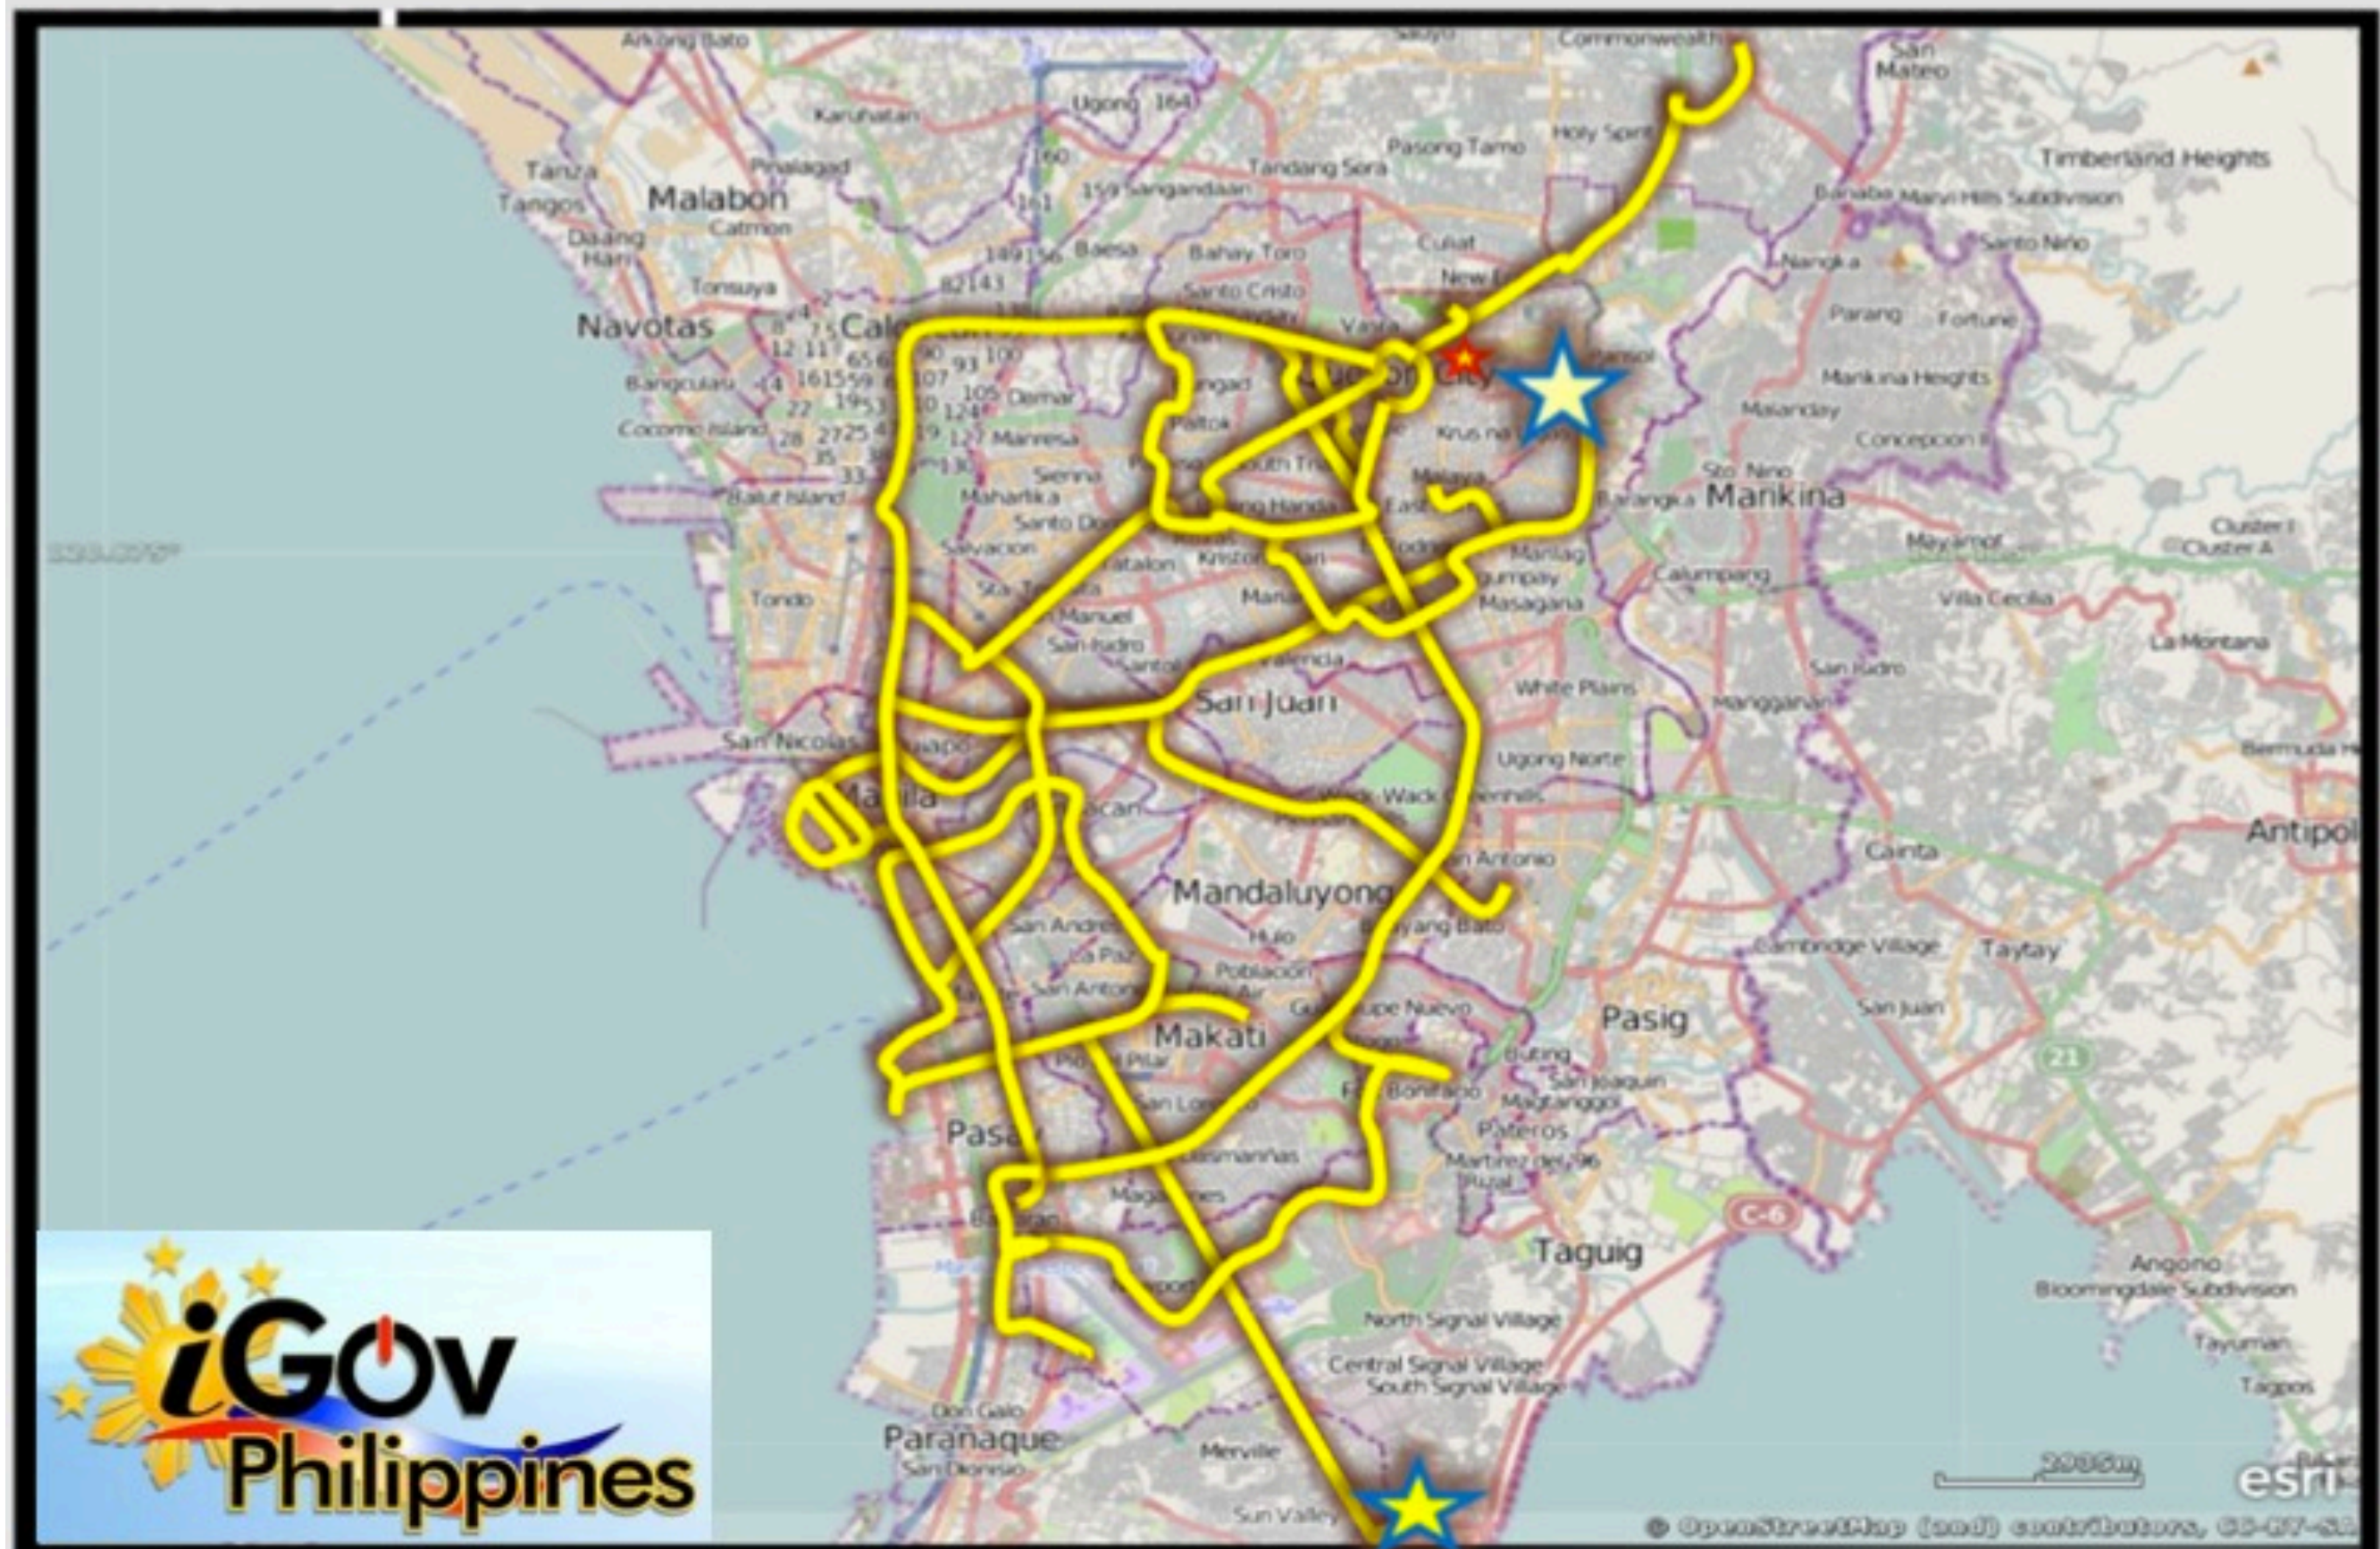

- 200Mbps to Globe-Manila (commercial)
- 200Mbps upcoming (commercial)
- 1Gbps to PhOpenIX (internet exchange)
- 50Mbps to Globe-Cebu (local loop)
- 10Gig ASTI-NCC (local loop)

Luzon (Metro Manila)

Benefits

with the effects of climate change...

...addressing food security is essential in order to meet the needs of the world's population

Crop Research

Over the network, IRRI is able to exchange multi-gigabytes of genetic data with research centers in Europe and other parts of the world, used to develop resilient rice varieties for the world's rice farmers

★
TEIN3
global collaboration

High-speed networking:
decoding the diversity of rice

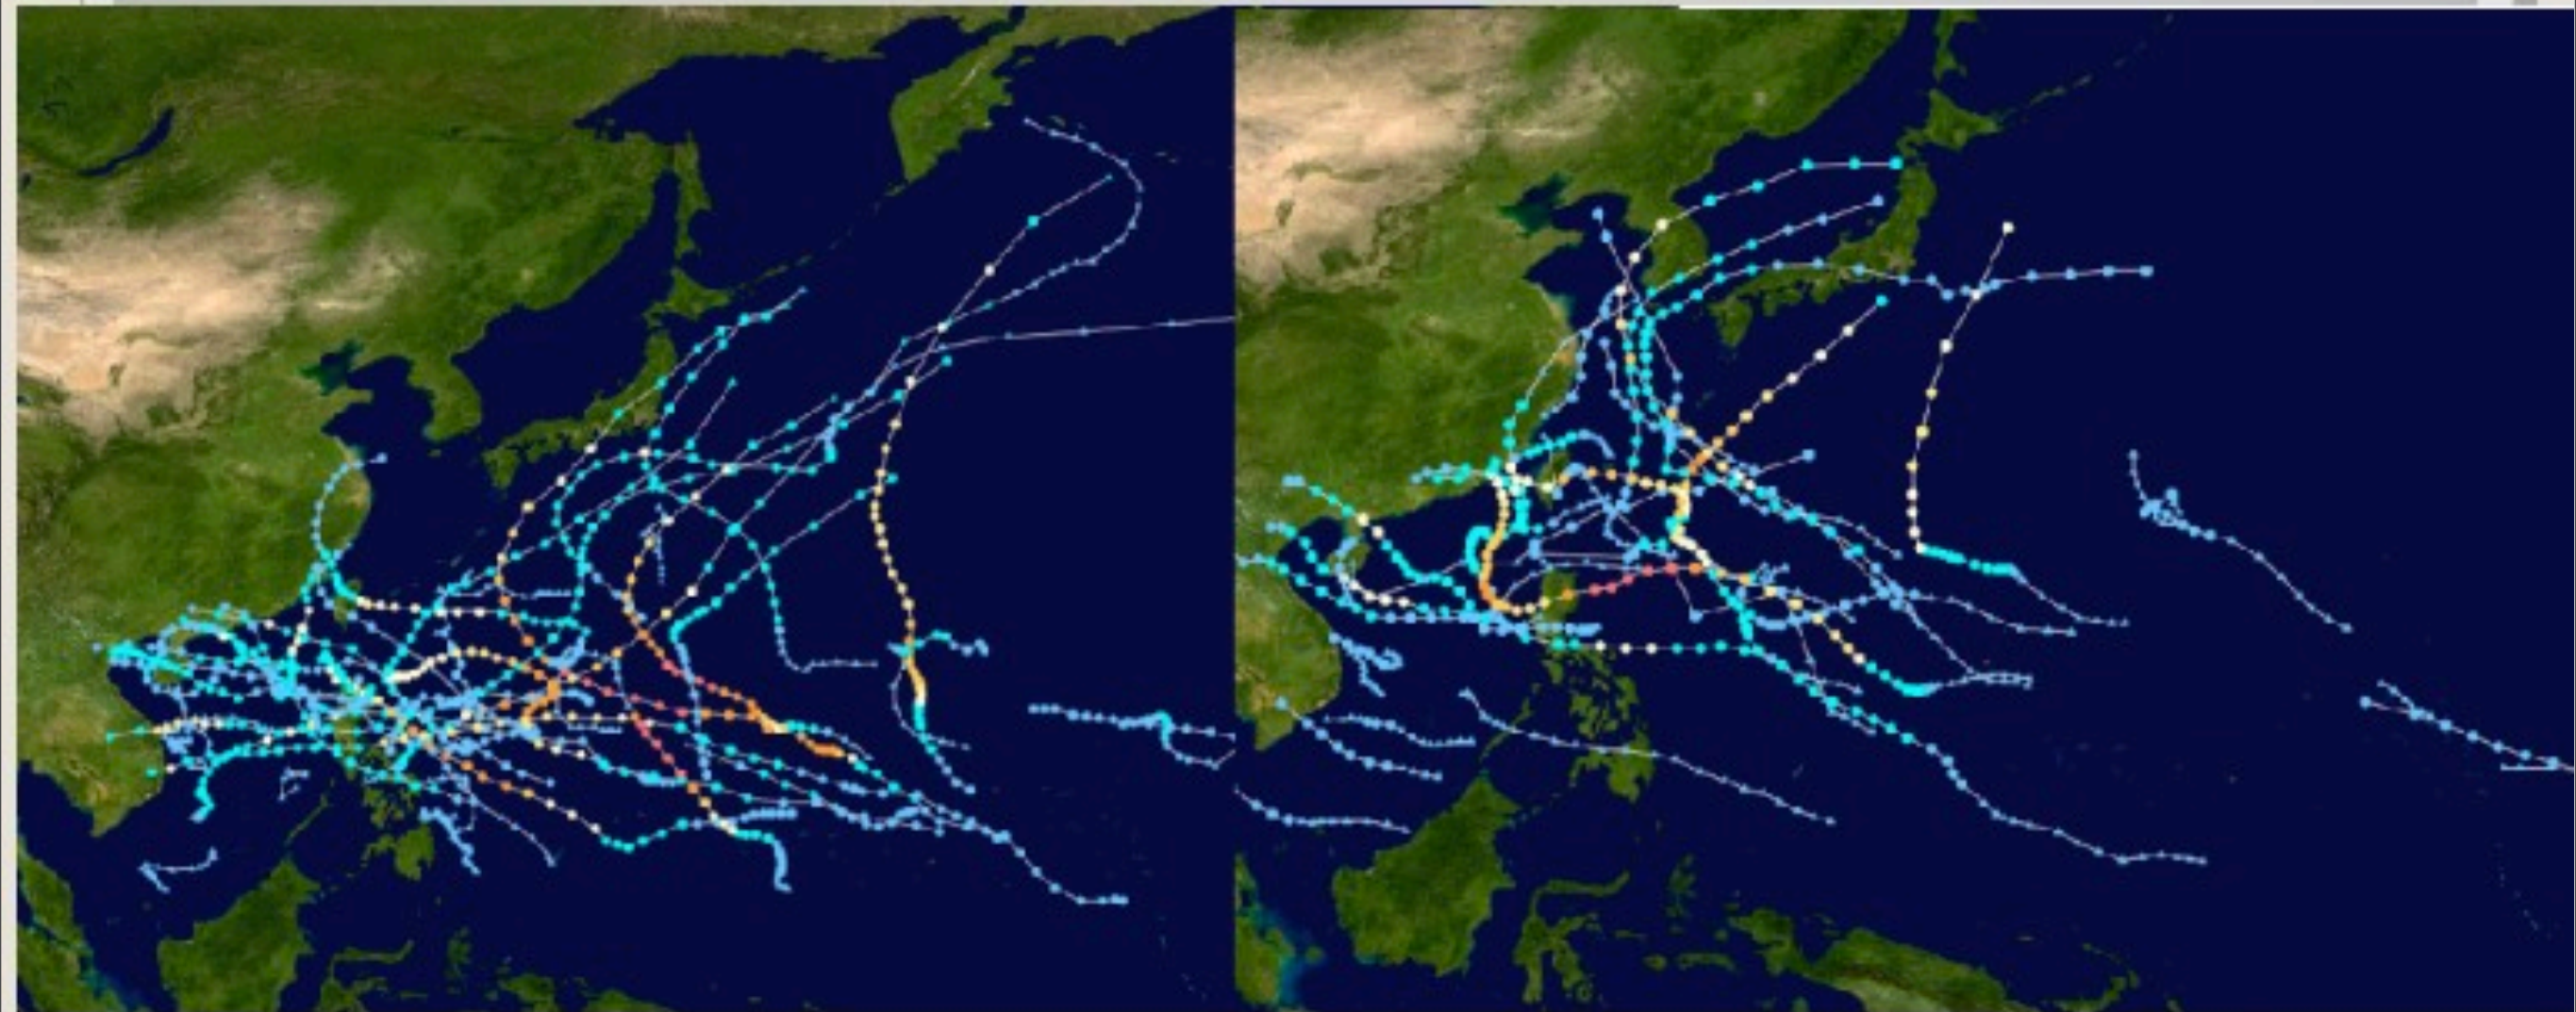

It has been the world's most... by 2050. As... more rice on less... land and water, farmers need new rice varieties adapted to changing climatic conditions. The main objective of the International Rice Research Institute (IRRI) in the Philippines is to help farmers improve their yields and thus sustain their livelihoods – a mission that calls for joint efforts across the globe and for high-performance data communications networks, such as TEIN3, to facilitate data-intensive collaborative crop research.

Local livelihoods on the line

One of the consequences of climate change for many millions of rice farmers today is an increased risk of flooding. Although

each year, an average of 20 typhoons hit the Philippines...

...causing millions-worth of damage to infrastructure, crops, and lives

Disaster Warning

The Philippine's weather bureau is able to acquire weather data from its German counterpart, which aids in providing the Filipino public with timely forecasts

High-speed networking: saving lives by typhoon forecasting

Typhoons are major natural killers. High winds and extreme rainfall damage property, while collapsing buildings, flood waters and disruption to food supply, sanitation and communications cause injury and death. Nothing can be done about the weather, but a great deal can be accomplished if local authorities have the precious advantage of time to prepare. Effective disaster warning systems rely on accurate storm forecasts and the speedy communication of weather alerts. In this race against time, high-speed data networks can make all the difference to typhoon-prone regions like the Philippine archipelago.

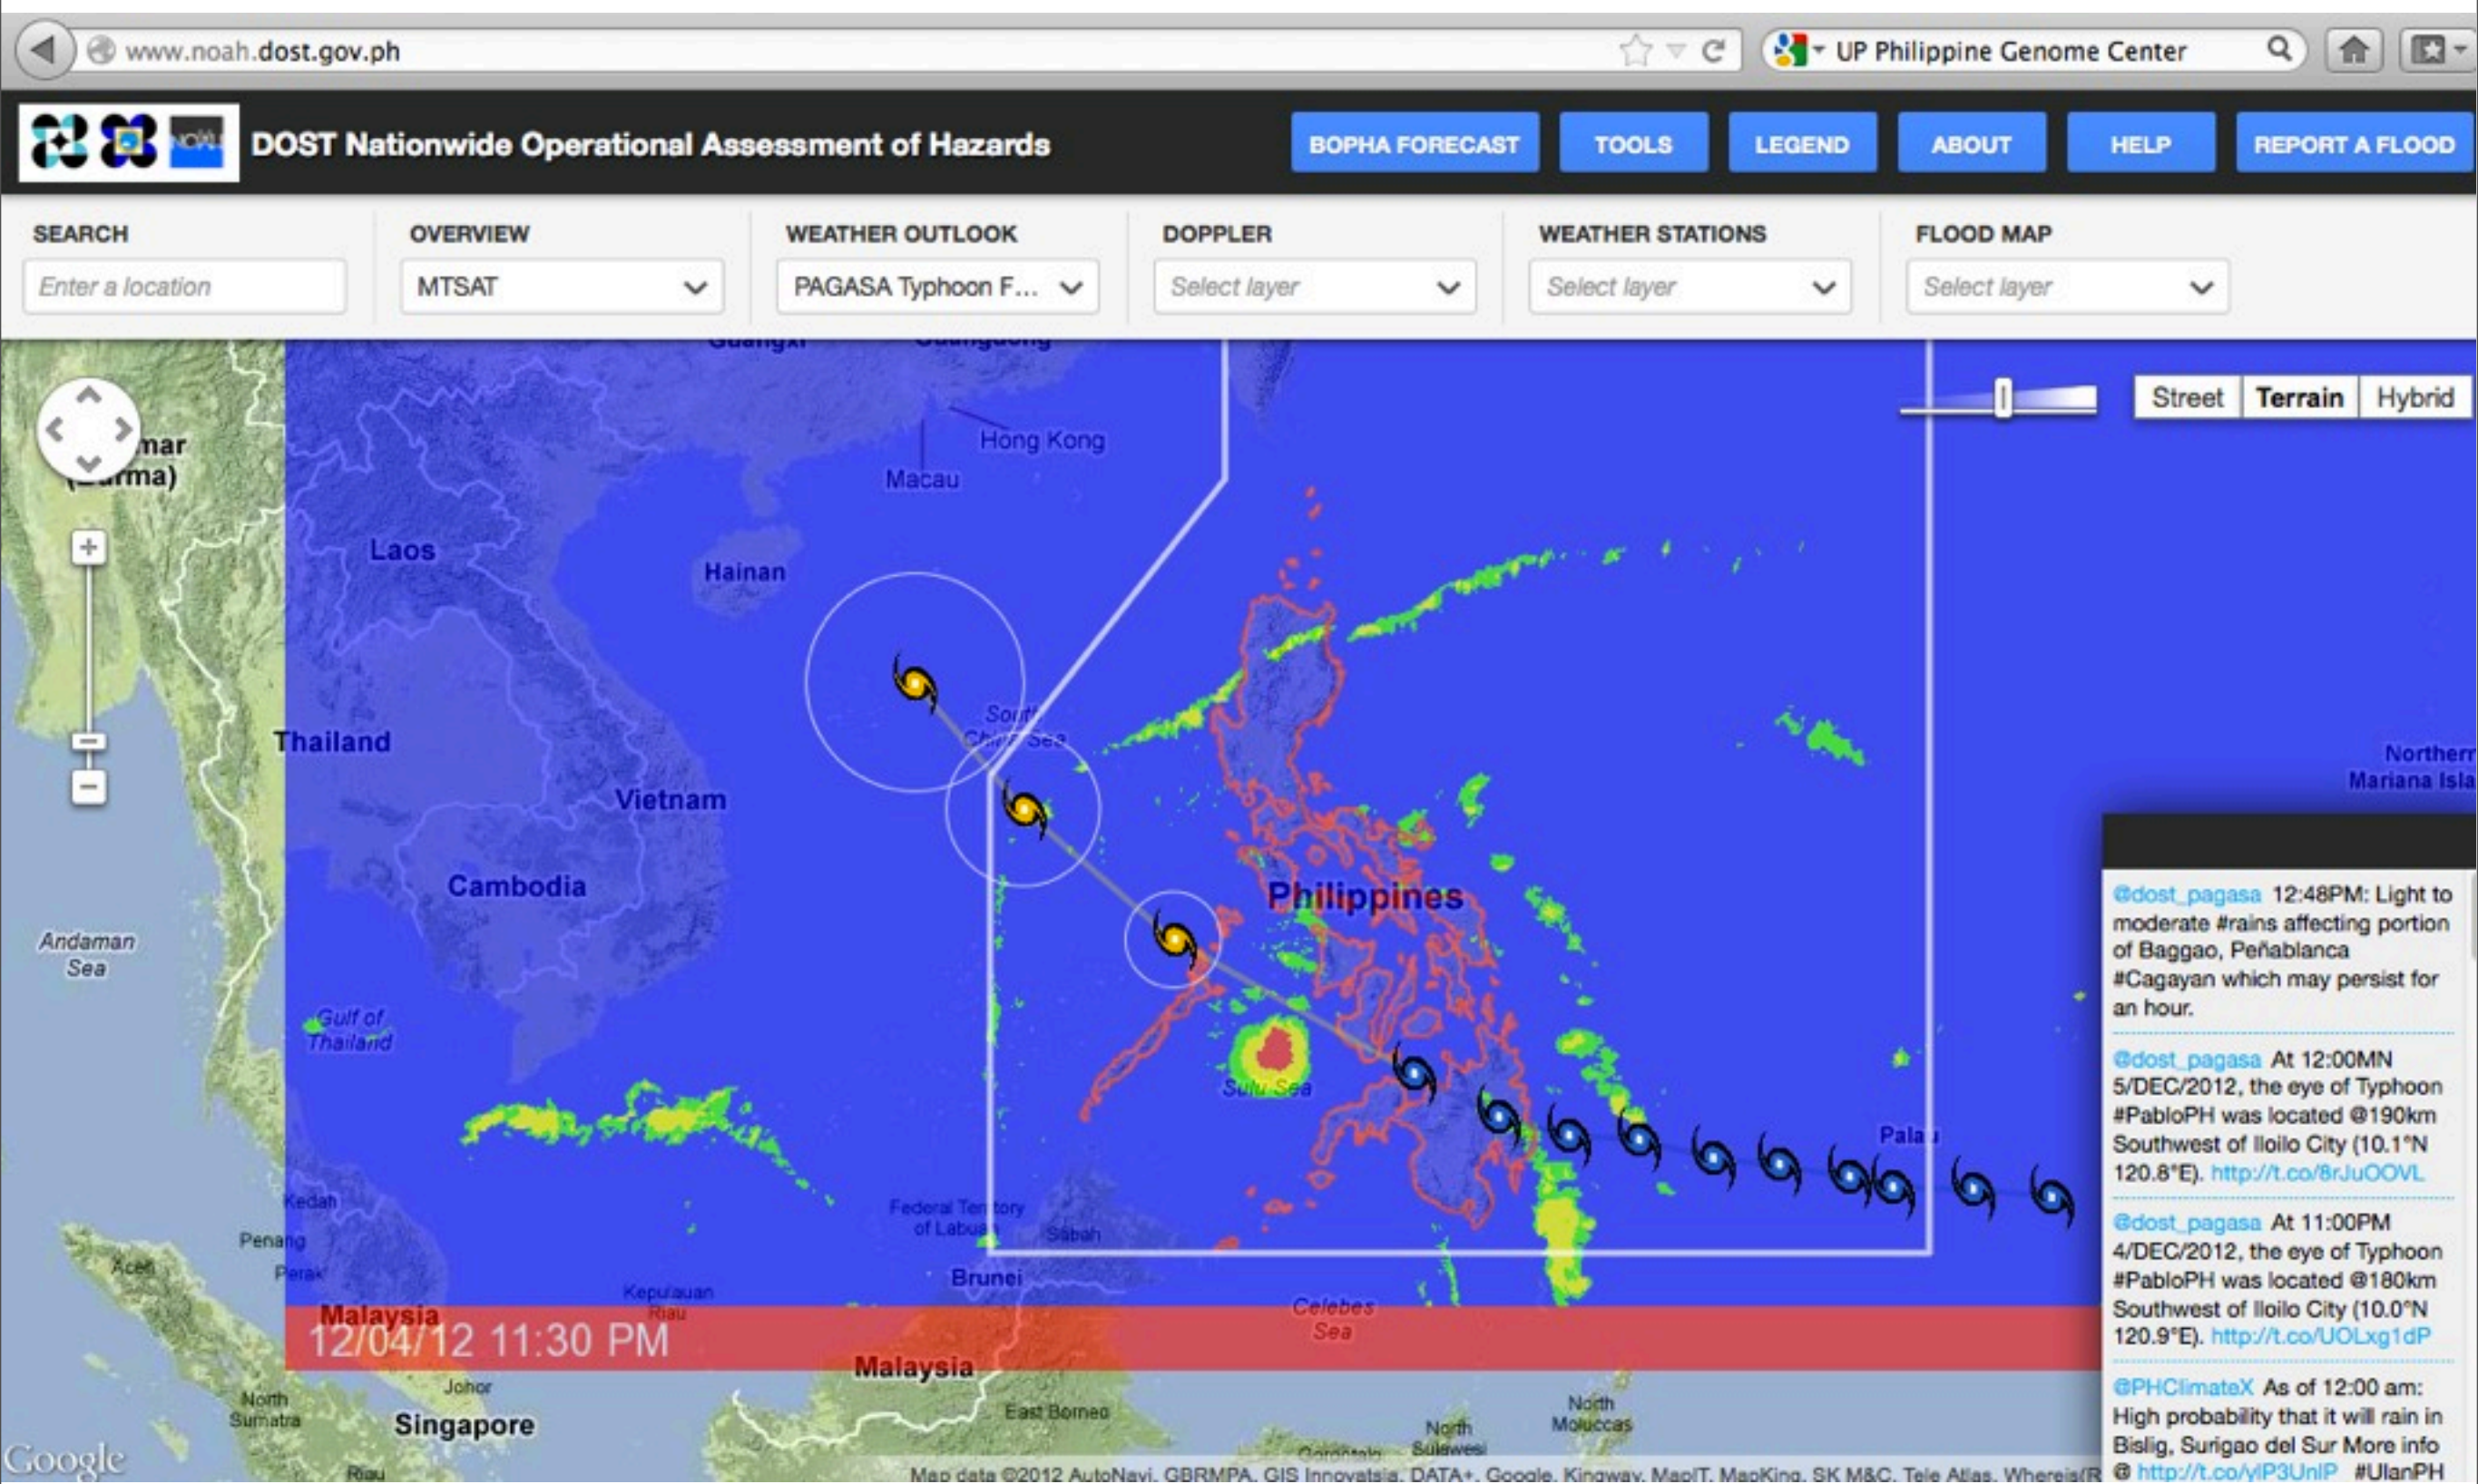

Two typhoons contrasted

School on Internet Asia Project

WIDE

The SOI Asia Project aims at contributing to the higher education development in Asian countries through the utilization of the Internet and Digital Technology, and by fully making use of the educational resources and technology of SOI.

What's New

• March 23rd, 2010 16:00-18:00 JST
ICT and Agriculture by Mie University

This course provides an comprehensive overview to the field information on food, agricultural and environmental sector. It provides background knowledge and also information on ICT application in food, agriculture and environment. Along this overview, four topics will be discussed after the short guidance on the goal and significance of this course by Dr. Takaharu Kameoka. These include the "ICT and agriculture overview" by Dr. Seiji Ninomiya, "Sensor network for agriculture" by Kiyoshi Honda (April 22nd, 2010), "ICT Utilization in agriculture - case studies" by Dr. Masayuki Hirota (May 25th, 2010) and "Optical sensing as an ICT application in Agriculture" by Takaharu Kameoka (June 21st, 2010).

3rd CONNECT-Asia Meeting
 Wednesday, 03 May 2010 00:00 | 35 | 46 | 06

UNESCO would like to hold the 3rd CONNECT-Asia meeting together with SOI meeting on 31 May and 1 June in Jakarta, Indonesia.

UNESCO will collaborate with Bandung Institute of Technology (ITS) as organizing committee on this event. The meeting will be held in Directorate Higher Education Indonesia.

ICT and Agriculture Course by Mie University
 Thursday, 11 March 2010 07:00 | 35 | 46 | 06

Course Duration: 23 March 2010 until June 2010

This 4 lecture course will cover topics such as: ICT and agriculture, sensor

Calendar Events
 June 2010

Mon	Tue	Wed	Thu	Fri	Sat	Sun
	1	2	3	4	5	6
7	8	9	10	11	12	13
14	15	16	17	18	19	20
21	22	23	24	25	26	27
28	29	30				

Upcoming Events
 21.06.2010 - 23.06.2010 Wapad + specific tools (TSD)

Conclusion

***How has it helped the
country?***

- Enables regional/global collaboration
- Supports mutually beneficial collaborations in science and ICT research
- Provides a platform where solutions to global issues/problems can be derived
