Confirm ROA Requests

Please confirm that you would like to create the following ROA(s). The accompanying table indicates how the validation status may change as a result.

Prefix	Max Length	AS
98.128.1.0/24	24	4128

Create

Cancel

Matched Routes

Prefix	Origin AS	Validation Status
98.128.1.0/24	4128	valid
98.128.1.0/24	3130	invalid

Routers

- Use Your Own! (in production images from C&J)
- 16 DynaMIPS 7200s in Lab

Be Careful !

- Some Caches Have a LOT of ROAs
- Do Not Configure DynaMIPS to a Server With RIR TALs Because RIPE Data Has Thousands of ROAs
- dfw0, 198.180.152.11 Has Full BGP Table if you want to crash DynaMIPS

In-Lab Router Accounts

ssh rN@vmini.rpki.net (N is your user number)

rN@vmini's password: *fnord*

user: *isplab*

password: *lab-PW*

enable

password: *lab-PW*

BGP Configuration

```
rN#conf t
```

Enter configuration commands, one per line. End with
CNTL/Z.

```
rN(config)#router bgp 651NN
```

```
rN(config-router)#bgp rpki server tcp 10.0.0.3 port \  
43779 refresh 60
```

```
rN(config-router)#end
```

```

```
    path 6802D7C8 RPKI State valid
```

Fat-Finger Detected

ROA Controls Validity

Try Your Own /24

Fun Things to Do

- Look at your neighbors' prefixes
- Use the GUI to change the ROA for your prefix, and wait for it to propagate
- Attack your neighbor's prefix by configuring your bgp to announce it
`router bgp 651nn`
`network 98.128.<neighbor>.0 255 255 255.0`

Notice it Did Not Work

```
router bgp 651nn
  network 98.128.<neighbor>.0 mask 255 255 255.0
ip route 98.128.<neighbor>.0 255.255.255.0 null0
show ip bgp 98.128.<neighbor>.0
```

- It is marked Invalid on your own router! It caught you injecting a bad prefix. To cheat you need to

```
router bgp 651nn
  no bgp bestpath prefix-validate local
```

- Now ask others to look for your announcement. They should see it as Invalid
