

'joe' editor

'joe' is a powerful editor and a lot more forgiving than 'vi', but needs to be installed as a separate package and may not always be available. You can get away with knowing only ^K X, and even that is shown in the on-screen help!

^K H <i>(Ctrl-K, H)</i>	Toggle help on/off
^C	Quit without saving
^K X	Write and quit
^K D	Write (optionally to a different filename) without quitting
^R	Redraw screen
^T T	Toggle insert/overwrite mode
^A	Move to start of line (or use 'Home')
^E	Move to end of line (or use 'End')
^K L <i>num</i> <i>[Enter]</i>	Go to line number <i>num</i>
^K V	Got to last line
^K F <i>pattern</i> <i>[Enter]</i>	Search for pattern; gives options for backwards and replace
^L	Repeat last search
^Y	Delete entire line
^_	Undo (on some terminals, Ctrl-Shift-Underscore is required)
^K B	Mark start of block
^K K	Mark end of block
^K C	Copy block to current cursor position
^K M	Move block to current cursor position
^K Y	Delete block
^K W	Write block to a file
^K R	Insert file at current cursor position

You can get alternative key bindings by invoking as 'jmacs', 'jstar' or 'jpico' which correspond to emacs, WordStar and pico respectively.
