What is NfSen

- Is a graphical (Web Based) front end to NfDump
- NfDump tools collect and process netflow data on the command line
- NfSen allows you to:
 - Easily navigate through the netflow data.
 - Process the netflow data within the specified time span.
 - Create history as well as continuous profiles.
 - Set alerts, based on various conditions.
 - Write your own plugins to process netflow data on a regular interval.

NfSen structure

- Configuration file - `nfsen.conf`
- NfDump files – Netflow files containing collected flows stored in ‘profiles-data’ directory
 - NB: It is possible for other programs to read NFdump files but don't store them for too long as they can fill up your drive
- Actual graphs – stored in ‘profiles-stat’ directory

NfSen Home Screen

Home Graphs Details Alerts Stats Plugins live [Bookmark URL](#) Profile: live ▼

Overview Profile: live, Group: (nogroup)

Graphs Tab

Graphs of flows, packets and traffic based on interface with netflow activated

NB: What is seen under Traffic should closely match what is under Cacti for the same interface

Profile: live, Group: (nogroup) - traffic

Details Page

- Most interesting page
- Can view present flow information or stored flow information
- Can view detailed Netflow information such as
 - AS Numbers (more useful if you have full routing table exported on your router)
 - Src hosts/ports, destination hosts and ports
 - Unidirectional or Bi-directional flows
 - Flows on specific interfaces
 - Protocols and TOS

Alerts and Stats

Alerts Page

- Can create alerts based on set thresholds eg, increase or decrease of traffic
- Emails can be sent once alarm is triggered

Stats page

- Can create graphs based on specific information
 - ASNs,
 - Host/Destination IPs/Ports
 - In/Out interfaces
 - Among others

Plugins

Several plugins available:

- **Porttracker** tracks the top 10 most active ports and displays a graph
- **Surfmap** displays country based traffic based on a Geo-Locator

More plugins available here

<http://sourceforge.net/apps/trac/nfsen-plugins/>

SurfMap

When to use NfSen

- Can be used for:
 - Forensic work: which hosts were active at a specific time
 - Viewing src/dst AS traffic, src/dst port/IP traffic among many other options
 - Identifying most active IPs or Protocols
- It is a tool to complement Cacti so that you can have more detailed info regarding the traffic
- With this information, you can make an informed decision eg:
 - You have a high amount of SMTP traffic, some machines could be sending out spam
 - 80% of your traffic is to ASN X. Perhaps its wise to connect directly with that network and save costs

Bidirectional vs Unidirectional traffic as seen via NfSen

Unidirectional and Bidirectional

- Unidirectional shows flows from host A to B and then host B to host A
- Bidirectional shows flows between Host A and B combined
- Can be used with any of the other filters (src port, src host plus many more)
- List of filters can be found here:
 - <http://nfsen.sourceforge.net/#mozTocId652064>

Bidirectional

All None Display: ☐ Sum ☒ Rate
