The Network Operations Center

NOC = Network Operations Center

- Come in many forms and depend on the size of your organization and your goals.
- “One or more locations from which control is exercised over your network.”
- NOCs can be:
 - Virtual
 - Located at the core of your network
 - With your help desk
 - Built in pieces
 - Etc.

The Network Operations Center

For purposes of this class each of you will create a virtual NOC using the project management software Trac already installed and partially configured on your machines.

A BIG NOC

There are even bigger NOCs out there...

A small NOC

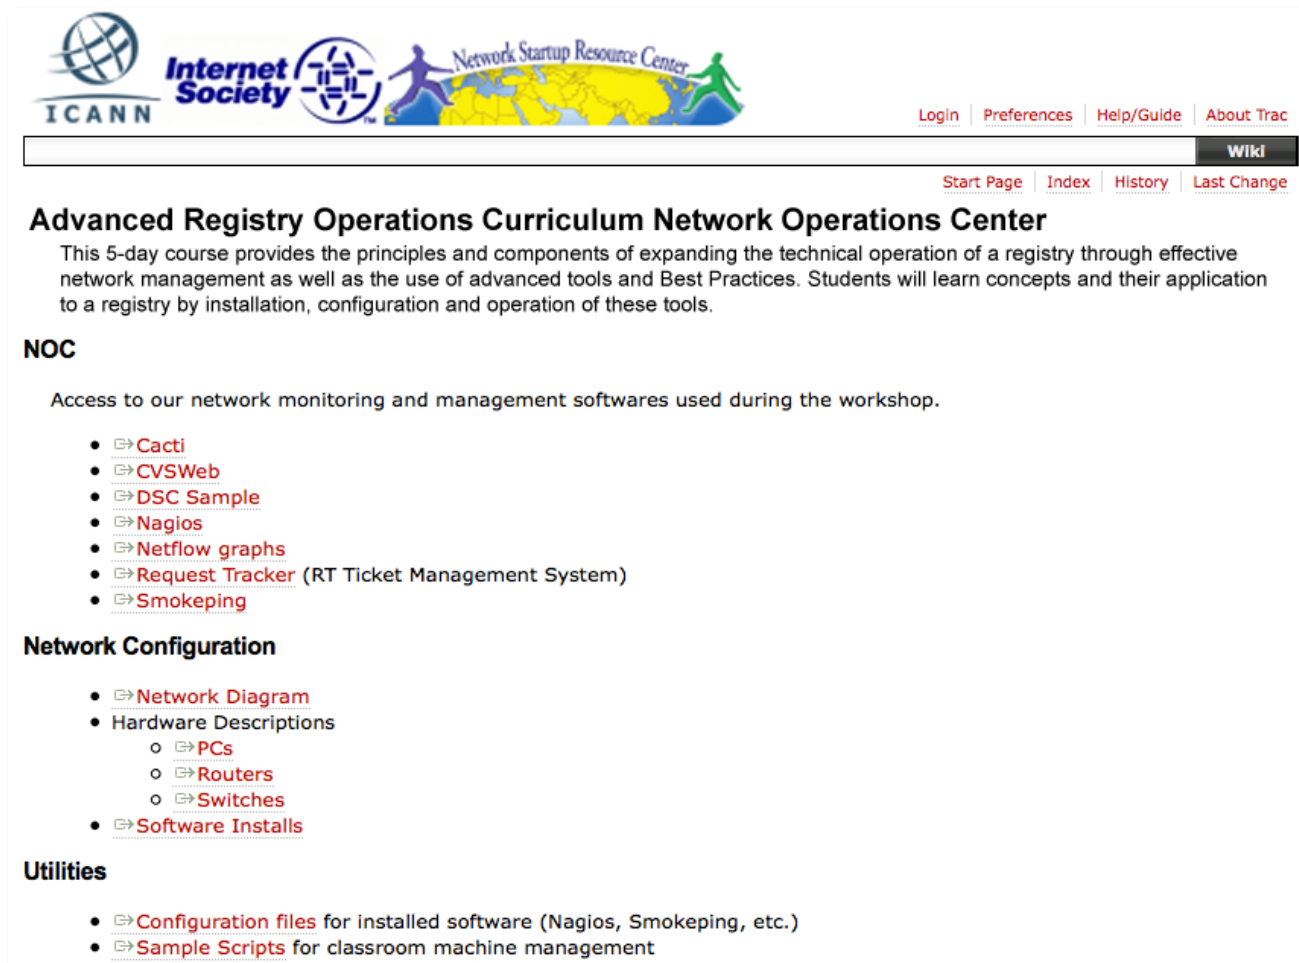

In the same room there is a desk with a phone, another computer and a monitor. This acted as the group's Help Desk.

Many network problems could be detected and solved on the spot!

Our Virtual NOC

We are working towards something like this:

The screenshot shows the homepage of the Internet Society Network Startup Resource Center. The header features logos for ICANN, Internet Society, and the Network Startup Resource Center, along with navigation links for Login, Preferences, Help/Guide, About Trac, and a Wiki button. Below the header, the main heading is "Advanced Registry Operations Curriculum Network Operations Center". A paragraph describes a 5-day course. The "NOC" section lists access to network monitoring and management software used during the workshop, including Cacti, CVSWeb, DSC Sample, Nagios, Netflow graphs, Request Tracker (RT Ticket Management System), and Smokeping. The "Network Configuration" section lists links for Network Diagram, Hardware Descriptions (PCs, Routers, Switches), and Software Installs. The "Utilities" section lists links for Configuration files for installed software and Sample Scripts for classroom machine management.

Advanced Registry Operations Curriculum Network Operations Center

This 5-day course provides the principles and components of expanding the technical operation of a registry through effective network management as well as the use of advanced tools and Best Practices. Students will learn concepts and their application to a registry by installation, configuration and operation of these tools.

NOC

Access to our network monitoring and management softwares used during the workshop.

- [Cacti](#)
- [CVSWeb](#)
- [DSC Sample](#)
- [Nagios](#)
- [Netflow graphs](#)
- [Request Tracker](#) (RT Ticket Management System)
- [Smokeping](#)

Network Configuration

- [Network Diagram](#)
- Hardware Descriptions
 - [PCs](#)
 - [Routers](#)
 - [Switches](#)
- [Software Installs](#)

Utilities

- [Configuration files](#) for installed software (Nagios, Smokeping, etc.)
- [Sample Scripts](#) for classroom machine management

Keeping “Trac” of it All

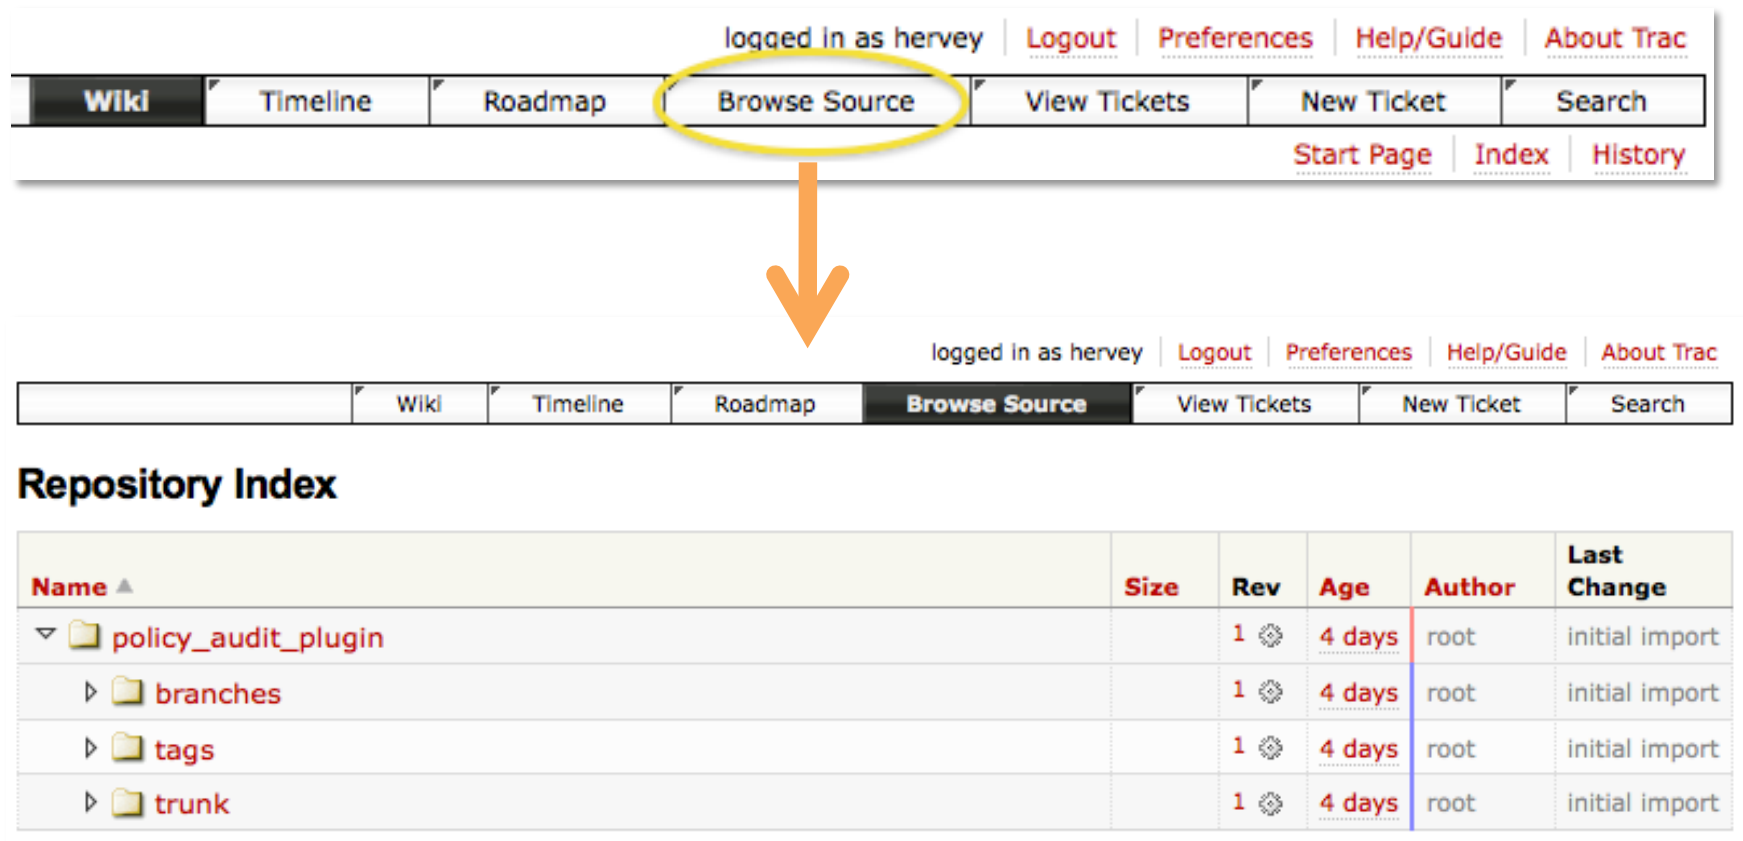

Note that Trac includes a *Timeline* feature. This includes:

- Changes to wiki pages.
 - Updates, creation, deletion and responsible user.
- Ticket history
 - Updates, creation, deletion and responsible user.
- Milestone updates

This is part of the built-in Version Control System (VCS) in Trac. Trac uses the *Subversion* VCS by default.

Trac and Subversion

You can link trac to Subversion repositories and access them via the Wiki:

The screenshot shows the Trac web interface. The top navigation bar includes links for 'logged in as hervey', 'Logout', 'Preferences', 'Help/Guide', and 'About Trac'. Below this is a secondary bar with 'Wiki', 'Timeline', 'Roadmap', 'Browse Source' (highlighted with a yellow circle), 'View Tickets', 'New Ticket', and 'Search'. An orange arrow points from the 'Browse Source' link to the 'Repository Index' table below.

Repository Index

Name ▲	Size	Rev	Age	Author	Last Change
▼ policy_audit_plugin		1	4 days	root	initial import
▷ branches		1	4 days	root	initial import
▷ tags		1	4 days	root	initial import
▷ trunk		1	4 days	root	initial import

Versioning and Documentation

Version Control Systems are part of any good documentation project.

During the week you will be exposed to this concept several more times.

There are many version control systems:

- CVS
- Subversion
- Mercurial
- git

Wikipedia has a good article on the concepts of “Revision Control”:

http://en.wikipedia.org/wiki/Revision_control

Using Trac

Use the built-in documentation:

Help

- **TracGuide** -- Built-in Documentation
- **TitleIndex** -- Complete list of local wiki pages

Located at the bottom of the Trac main page.

- If you have questions ask an instructor.
- You can find Trac here:

<http://trac.edgewall.org/>

Installing Trac

It's pretty hard to do the first time. Here is a Trac install Cookbook for Ubuntu:

<https://nsrc.org/trac/01-install-quickstart.txt>

Your Assignment

Document your network!

- *After each software install and configuration link to the new software.*
- Create an entry for your PC, other PCs, routers and switches in the classroom.
- Create or copy a classroom network diagram.
- Consider using Trac's Timeline and ticket features for outstanding issues and projects.
- Create a repository of configuration files and link to this.

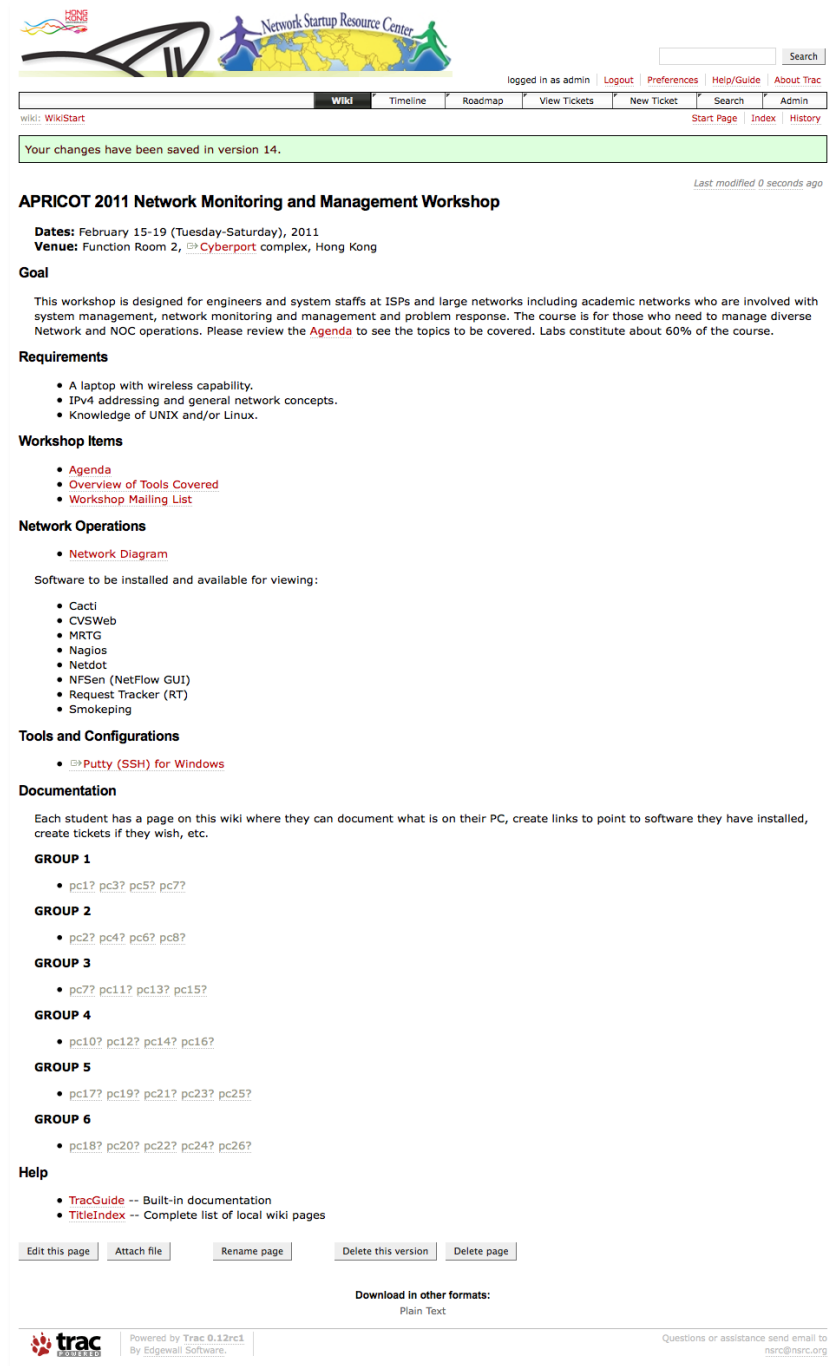

Your Assignment cont.

Documenting your network...

- Make note of what software is installed and versions.
- Document anything else that you think will make managing and monitoring your network easier.
- By the end of the week you could have a wiki instance similar to or better than the main page instance installed and configured on the workshop NOC machine.

Getting Started

Go to <http://noc/wiki/>

The screenshot shows the Trac web interface for a wiki. At the top, there are logos for the Network Startup Resource Center and the APRICOT project. A navigation bar includes links like 'Wiki', 'Timeline', 'Roadmap', 'View Tickets', 'New Ticket', 'Search', and 'Admin'. A green status bar indicates 'Your changes have been saved in version 14.' The main content area is titled 'APRICOT 2011 Network Monitoring and Management Workshop' and includes sections for 'Dates', 'Venue', 'Goal', 'Requirements', 'Workshop Items', 'Network Operations', 'Tools and Configurations', 'Documentation', and 'Help'. The 'Documentation' section lists various PC groups (GROUP 1 to GROUP 6) with links to their respective pages. The 'Help' section provides links to 'TracGuide' and 'TitleIndex'. At the bottom, there are links for 'Edit this page', 'Attach file', 'Rename page', 'Delete this version', and 'Delete page'. A footer section includes the Trac logo, version information, and contact details for the Network Startup Resource Center.

APRICOT 2011 Network Monitoring and Management Workshop

Dates: February 15-19 (Tuesday-Saturday), 2011
Venue: Function Room 2, [Cyberport](#) complex, Hong Kong

Goal

This workshop is designed for engineers and system staffs at ISPs and large networks including academic networks who are involved with system management, network monitoring and management and problem response. The course is for those who need to manage diverse Network and NOC operations. Please review the [Agenda](#) to see the topics to be covered. Labs constitute about 60% of the course.

Requirements

- A laptop with wireless capability.
- IPv4 addressing and general network concepts.
- Knowledge of UNIX and/or Linux.

Workshop Items

- [Agenda](#)
- [Overview of Tools Covered](#)
- [Workshop Mailing List](#)

Network Operations

- [Network Diagram](#)

Software to be installed and available for viewing:

- Cacti
- CVSWeb
- MRTG
- Nagios
- Netdot
- NFSen (NetFlow GUI)
- Request Tracker (RT)
- Smokeping

Tools and Configurations

- [Putty \(SSH\) for Windows](#)

Documentation

Each student has a page on this wiki where they can document what is on their PC, create links to point to software they have installed, create tickets if they wish, etc.

GROUP 1

- [pc1? pc3? pc5? pc7?](#)

GROUP 2

- [pc2? pc4? pc6? pc8?](#)

Getting Started

Log in to the Trac instance on the NOC

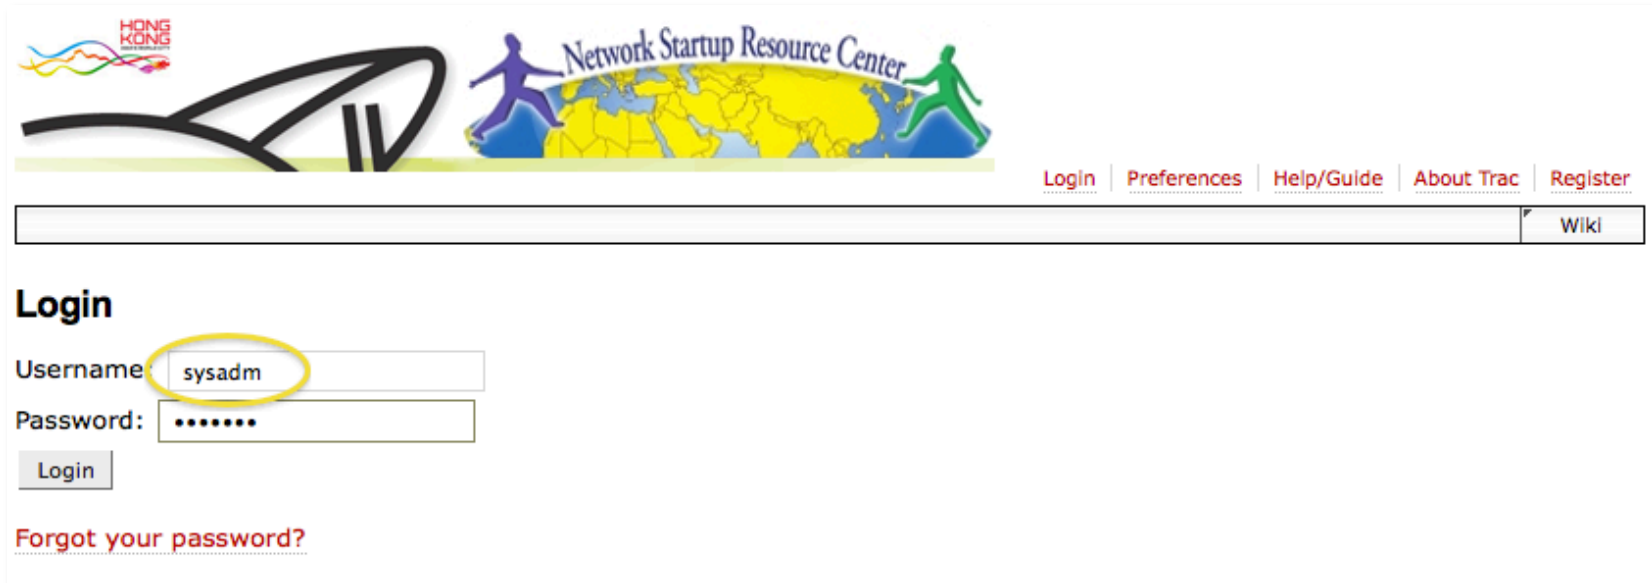

The screenshot shows the Trac web interface. At the top, there is a banner for the "Network Startup Resource Center" featuring a stylized map of Asia and two figures. To the left of the banner is the "HONG KONG" logo. Below the banner, there is a navigation bar with links: "Login" (highlighted with a yellow circle), "Preferences", "Help/Guide", "About Trac", and "Register". Below this is a search bar and a "Wiki" button. The main content area displays the title "APRICOT 2011 Network Monitoring and Management Workshop". Below the title, the dates "February 15-19 (Tuesday-Saturday), 2011" and the venue "Function Room 2, Cyberport complex, Hong Kong" are listed. On the right side of the main content area, there are links for "Start Page", "Index", and "History", along with a timestamp "Last modified 3 minutes ago".
